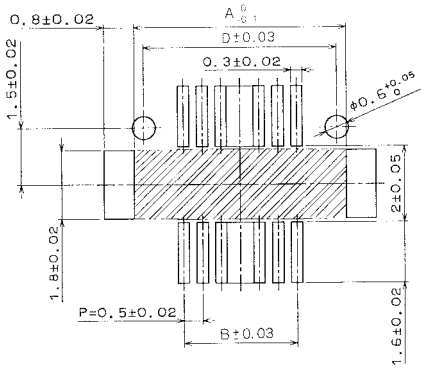
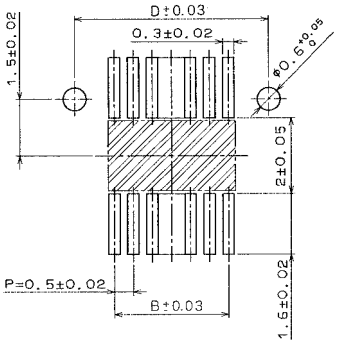
◆Recommended PCB mounting pattern

■DF12 with metal fitting



■DF12 without metal fitting



Note 1 : Refer to A299 to A304 for sides A, B, and D.

Note 2 : If the boss isn't included, the boss shown in the above figure isn't required.

Note 3 : If the pattern is included in the shaded area, and not treated with resist, it could touch the connector contact .

◆Precautions for Use

1.Recommended Temperature Profile (SMT)	 Note 1 : Maximum twice action is allowed under the same condition. However, the interval between the first and second actions must be maintained at the room temperature. Note 2 : The temperature indicates the board surface temperature In the connector lead area.
2.Recommended Manual Soldering Condition (SMT)	Soldering iron temperature: 290±10℃, Soldering time: Within 2 seconds
3.Recommended Screen Thickness (SMT)	0.12mm When the 0.15mm thickness is used, set the metal mask open area to 85% as a target.
4.Board Warp(SMT)	Maxmum 0.02mm in the connector center area, based on both connector edges
5.Cleaning Condition	Refer to "Nylon Connector Use Hand book".
6.Cautions	■ The receptacle is designed in a structure where contacts are exposed. Touching it with bare hands would cause contact failure or electrostatic element damage. ■ Where no board is mounted, the insertion or extraction will cause damage or contact deformation. ■ Avoid retaining the board with the connector only, and fix the board by any other means than the connector. ■ Excessive scoop insertion or extraction may result in damage. ■ In the manual soldering process, don't carry out the flux coating which will cause a flux blister on the connector. ■ The color phase of this product may be slightly different from that of the formed product according to the manufacturing lot. However, the difference doesn't affect the performance.
